## RESEARCH INTERESTS

---

My research interests lie at the intersection of deep learning, computational neuroscience, and computer vision. I am actively working on developing deep learning methods that cover the following topics:

- Learning without explicit human annotation through self-supervision and generative modeling;
- Building deep learning architectures that are interpretable, identifiable, and generalizable;
- Developing efficient deep learning methods for large-scale image segmentation with limited or noisy annotations, explicit constraints, or topological/geometrical priors.
